Tips for best results:

- Use text-based PDFs for best parsing accuracy
- Ensure questions have exactly 4 multiple choice options
- Use clear numbering (1., 2., etc.) for questions
- Use A), B), C), D) or 1), 2), 3), 4) for answer choices
- Avoid scanned or image-based PDFs

The primary reason for venting an engine oil tank is to:

💡 Tip: Press A, B, C, or D to select answers quickly • Press Space for Next Question

Review Difficult Important Unclear Favorite

A cool the oil.

B allow for expansion of hot oil.

C prevent overflow.

D prevent excessive pressure in the tank.

AI Explanation

Here's Why

The correct answer is to prevent excessive pressure in the tank. While allowing for expansion of hot oil is a consideration, the primary reason for venting an engine oil tank is to prevent pressure from building up inside the tank. This pressure can be caused by thermal expansion of the oil, air leaks, or other factors. Venting ensures that the tank operates at or near atmospheric pressure, preventing potential damage or failure.
